

## Sprockets for the LEDCO I-30

All the idler sprockets on the roller drives are the same. The sprocket is part #PRS253 which is a 21 tooth sprocket with 1/2" bore. You have to also order the bushing, part # PRB040, 1 for each idler sprocket) and we'll press it in. They run on a shoulder bolt 3/8 X 7/8, part # .375IAC14.

The front laminating roll sprockets are Part # PRS258C (7/8 bore / 32 tooth)

The pull roll sprockets are part # PRS261 (7/8 bore / 31 teeth). The motor sprockets are part # Part # PRS285B.

The 2 sprockets for the cooling tubes are part PRS357. Note: these sprockets have a special keyway in them so any old sprocket won't work.
